Document Status Sheet

Document Control Number: PKT-SP-MIB-SIG-I09-050812				
Document Title: PacketCable™ Signaling MIB Specification				
Revision History: I01 Released — December 1, 1999				
I02 Released — March 23, 2001				
I03 Released — December 21, 2001				
I04 Released — October 18, 2002				
I05 Released — November 27, 2002				
I06 Released — April 15, 2003				
I07 Released — July 28, 2003				
I08 Released — January 13, 2004				
I09 Released — August 12, 2005				
Date: August 12, 2005				
Status:	Work in Progress	Draft	Issued	Closed
Distribution Restrictions:	Author Only	GL/Member	GL/ PacketCable Vendor	Public

Key to Document Status Codes:

- Work in Progress** An incomplete document, designed to guide discussion and generate feedback, that may include several alternative requirements for consideration.
- Draft** A document in specification format considered largely complete, but lacking review by Members and vendors. Drafts are susceptible to substantial change during the review process.
- Issued** A stable document, which has undergone rigorous member and vendor review and is suitable for product design and development, cross-vendor interoperability, and for certification testing.
- Closed** A static document, reviewed, tested, validated, and closed to further engineering change requests to the specification through CableLabs.

Trademarks:

DOCSIS®, eDOCSIS™, PacketCable™, CableHome®, CableOffice™, OpenCable™, OCAP™, CableCARD™, M-CMTST™ and CableLabs® are trademarks of Cable Television Laboratories, Inc.

1 SCOPE

This specification describes the PacketCable Signaling (SIG) MIB requirements.

2 REFERENCES

In order to claim compliance with this specification, it is necessary to conform to the following standards and other works as indicated, in addition to the other requirements of this specification. Notwithstanding, intellectual property rights may be required to use or implement such normative references.

DESCRIPTION
    "This MIB module supplies the basic management
    object for the PacketCable Signaling
    protocols. This version of the MIB includes
    common signaling and Network Call Signaling
    (NCS) related signaling objects.

PktcCodecType ::= TEXTUAL-CONVENTION
    STATUS      current
    DESCRIPTION
        "Textual Convention defines various types of
        CODECs that MAY be supported. The list of CODECs
        MUST be consistent with the Codec RTP MAP Parameters
        Table in the PacketCable CODEC specification. In-line
        embedded comments below contain the Literal Codec Name
        for each CODEC. The Literal Codec Name corresponds to
        the second column of the Codec RTP MAP Parameters Table.
        The Literal Codec Name Column contains the CODEC name
        that is used in the LCD of the NCS messages CRCX/MDCX,
        and is also used to identify the CODEC in the CMS
        Provisioning Specification. The RTP Map Parameter
        Column of the Codec RTP MAP Parameters Table contains
        the string used in the media attribute line ('a=') of the
        SDP parameters in NCS messages."

    }

PktcRingCadence ::= TEXTUAL-CONVENTION
    STATUS      current
    DESCRIPTION
        "This object represents a ring cadence in bit string
        format. The ring cadence representation starts with the
        first 1 in the pattern (the leading 0s in the MSB are
        padding and are to be ignored). Each bit
        represents 100ms of tone; 1 is tone, 0 is no tone. 64
        bits MUST be used for cadence representation, LSB 4 bits
        are used for representing repeatable characteristics.
        0000 means repeatable, and 1000 means non repeatable.
        During SNMP SET operations 64 bits MUST be used,
        otherwise MTA MUST reject the value. As an example, the
        hex representation of a ring cadence of 0.5 secs on; 4
        secs off; repeatable would be:0x0001F00000000000."

pktcSigServiceClassNameUS    OBJECT-TYPE
    SYNTAX          SnmpAdminString (SIZE (0..15))
    MAX-ACCESS      read-write
    STATUS          obsolete
    DESCRIPTION
        "This object contains a string indicating the Service
        Class name to create an Upstream Service (US) Flow for
        NCS. If the object has an empty string value then the
        upstream NCS SF is not created and the best effort
        SF is used for upstream NCS data. The creation of the NCS
        SF primary occurs before Voice Communication Service is
        activated on the device. If this object is set to a
        non-empty (non-zero length) string, the MTA MUST create
        the NCS SF if it does not currently exist and the
        pktcSigServiceClassNameMask object has a non-zero value.
        If this object is subsequently set to an empty
        (zero-length)string, the MTA MUST delete the NCS SF
        if it exists. Setting this object to a different value
        does not cause the Upstream Service Flow to be
        re-created. The string MUST contain printable ASCII
        characters. The length of the string does not include a
        terminating zero. The MTA MUST append a terminating zero
        when the MTA creates the service flow. "

    STATUS          current
    DESCRIPTION
        "This object contains a string indicating the call agent
        name(e.g.: ca@abc.def.com). The call agent name
        after the character '@', MUST be a fully qualified
        domain name and MUST have a corresponding
        pktcMtaDevCmsFqdn entry in the pktcMtaDevCmsTable. For
        each particular end-point, the MTA MUST use the current
        value of this object to communicate with the corresponding
        CMS. The MTA MUST update this object with the value of the
        'Notified Entity' parameter of the NCS message. Because of the high
importance of this object to
        the ability of the MTA to maintain reliable NCS
        communication with the CMS, it is highly recommended not
        to change this object's value through management station
        during normal operations."

    operational          (1),
    noSecurityAssociation (2),
    disconnected          (3)
}
MAX-ACCESS    read-only
STATUS        current
DESCRIPTION   "This object contains the error status for this interface.
              The operational state indicates that all operations
              necessary to put the line in service have occurred and CMS
              has acknowledged the RSIP message successfully.
              If 'pktcMtaDevCmsIpsecCtrl' is enabled for the associated
              Call Agent, the noSecurityAssociation status indicates
              that no Security Association (SA) yet exists for this
              endpoint. Otherwise, the state is unused.
              The disconnected status indicates one of the following two:
              1. If 'pktcMtaDevCmsIpsecCtrl' is disabled then no
              security association is involved with this endpoint: the
              NCS signaling Software is in process of establishing the
              NCS signaling Link via an RSIP exchange.
              2. Otherwise, pktcMtaDevCmsIpsecCtrl is enabled, the
              security Association has been established and the NCS
              signaling Software is in process of establishing the NCS
              signaling Link via an RSIP exchange."

Appendix A. Revision History

The following Engineering Change Notices have been incorporated into PK-SP-MIB-SIG-I03-011221.

ECN	Date Ratified	Summary
mib-n-01187	12/3/01	Correct MIB error in sec-n-1029, and complete deletion of the mean deviation objects. These are MIB corrections that were driven by the security team.
prov-n-01039	5/7/01	In the Provisioning specification (PKT-SP-PROV-I02-010323), it is not clear that the config file MUST be rejected if the required info is not there. Also, the CMS table in the MTA MIB does not contain the realm name, but an index into the realm table. This should be reflected in the config file table.

The following Engineering Change Notices have been incorporated into PK-SP-MIB-SIG-I04-021018:

ECN	Date Ratified	Summary
mib-n-02134	7/29/02	Specifies the string length for service class name used in Signaling MIB specifications.
mibmta-n-02083	6/24/02	This ECR makes I03 MIB specification and I05 security specification consistent.
mibsig-n-02043	6/24/02	Correcting references to Security Spec; R0,R6 and R7 Cadence parameters are made mandatory
mib-n-02118	7/15/02	The list of the CODECs in the "PktcCodecType" TEXTUAL-CONVENTION in the Signaling MIB is not consistent with the CODEC list in CODEC spec (codec-n-01228).

The following Engineering Change Notice has been incorporated into PK-SP-MIB-SIG-I05-021127:

ECN	Date Ratified	Summary
mibsig-n-02203	11/18/02	Changes MIB syntax INTEGER to Integer32 in Signaling and MTA MIB specifications.

The following Engineering Change Notices have been incorporated into PK-SP-MIB-SIG-I06-030415:

ECN	Date Ratified	Summary
mibsig-n-02222	1/20/03	Default value changed to match the description of the Ringsplash(rs) and R5 cadence MIB. Clarified requirement clarification in 64-bit Cadence representation..
mibsig-n-03050	5/19/03	The ECR accumulates changes required in the MIB SIG Specification for syntactical correctness

The following Engineering Change Notice has been incorporated into PK-SP-MIB-SIG-I07-030728:

ECN	Date Ratified	Summary
