

Invention Title:	TV screenshot using remote control
Invention Summary:	remote controlled screenshot on TV
Invention Description:	<p>Problem statement:</p> <p>Often times while watching TV there arises a need to note an address, a phone number, a website address or we simply like a picture which we want to capture and store.</p> <p>Currently there is no such feature to capture a television screen shot.</p> <p>Solution:</p> <p>As a technological innovation it would help if a television remote has a screenshot button programmed to take an instant screenshot and store it. This functionality already exists in computers, laptops, iPads and smart phones. If we could include it in television remote as well it will be novel and very useful.</p>
Invention Commercial Value/Customers:	excellent
Invention Differences:	I have not seen this being done in the context of TV and remote controls
